PROFILE

Software engineer with 5+ years shipping products across banking, proptech and e-commerce. I do my best work on teams where ideas get shared and challenged, and I look for new problems that push me to find creative solutions.

TECH SKILLS

LANGUAGES

JavaScript · TypeScript · HTML · CSS

FRONTEND

React · React Native · Next.js · Redux

BACKEND

Node.js · Express · REST APIs · Ajax

DATA

PostgreSQL · Sequelize · MongoDB · Mongoose · Supabase · Pinecone

AI

LLM agent systems · Claude AI / AI-assisted development

CLOUD

GCP · GKE · Vercel

EDUCATION

Henry

Full Stack Developer
Aug 2021 – Jan 2022

Universidad de Morón

Law School

LANGUAGES

Spanish Native
English Professional

EXPERIENCE

Pulppo · real estate technology platform (Habi)

Mar 2026 – Present

Software Engineer

Build internal tools and AI agent systems for the platform, owning the agent layer of **Coach AI** — an AI coaching product that surfaces daily personalized insights to real estate brokers.

- Designed Coach AI's agent layer as a nested router hierarchy (orchestrator → performance → inventory) over a shared state schema, with deterministic routing and broker identity scoped through graph state.
- Built the metric tooling behind it: 46 inventory metrics grouped into 6 tools, with EWMA smoothing and regression-slope trends driving targeted broker feedback.
- Migrated the 1-5-10 operations dashboard from Python/Streamlit to Next.js with live MongoDB data, deployed on Vercel with Google login.
- Fullstack work across UI, API endpoints, Git/Slack integrations and the analytics layer; daily use of Claude AI for pair-programming, code generation and refactors.

Santander Tecnología

Apr 2022 – Mar 2026

SSR Software Engineer · Jun 2023 – Mar 2026

Developed and maintained critical features for the bank's customer application with Next.js, React, Node.js, CSS and Flame (Santander's UI system). Led the development of two micro-frontends for the home banking platform:

- A module for managing user notification preferences, consuming RESTful APIs, built with Next.js and React on a Node.js + Webpack workflow.
- A feature enabling users to update personal information such as email and phone number.

Jr. Software Engineer · Apr 2022 – Jun 2023

- Developed an internal back-office system empowering employees to create and manage emails, SMS and home banking notifications, abstracting HTML complexity to streamline communication processes.

PROJECTS

Simple-AI · founder

2025 – Present

Founded a company that builds AI agents for e-commerce businesses across WhatsApp, Facebook and Instagram, automating customer interactions, sales and support conversations.

- Lead the product end-to-end: agent design, integrations with messaging platforms and deployment for different e-commerce clients.

Data Jury · fullstack developer

Personal project

End-to-end design, development and deployment of a production app live on Google Play and the App Store, where lawyers registered in the Colegio Público de Abogados evaluate and rate courts.

- Built as a webview (Next.js + React), available both as a mobile app and a web platform.
- Sole developer: product, frontend, backend, store submissions and maintenance.
